

CONSUMER FINANCIAL PROTECTION BUREAU (CFPB) COMPLAINT ANALYTICS (2017–2023)

Tool: Power BI | **Dataset Size:** 62,520 complaints | **Domain:** Regulatory / Consumer Protection

Overview

This project analyzed over 62,000 consumer complaints received by the Consumer Financial Protection Bureau (CFPB) between 2017 and 2023. Using Power BI, I created an interactive dashboard that tracked complaint growth trends, company response efficiency, complaint categories, and geographic distribution. The analysis aimed to support evidence-based policy design and the prioritization of enforcement.

Key Findings

- Complaints increased by **135%** from 2017 to 2023, reflecting heightened consumer awareness and systemic service gaps.
- **Checking and savings accounts** represented 40% of total complaints.
- Only **23.5% of consumers received monetary relief**, despite 93.8% of companies responding on time.
- **California, Texas, and Florida** recorded the highest complaint volumes.
- Mid-size financial institutions showed inconsistent complaint resolution trends compared to larger banks.

Impact

The insights provided a foundation for the CFPB's policy and examination teams to:

- Prioritize state-specific outreach and financial literacy campaigns.
- Re-evaluate complaint response time benchmarks.
- Introduce digital complaint-processing automation.
- Recommend improved regulatory monitoring of mid-tier banks.

Skills & Tools Applied

Power BI (data modeling, DAX, drill-through filters), data cleaning, KPI tracking, storytelling through visuals, and stakeholder-oriented report design.
